Introduction

This provincial snapshot highlights priority child-related Sustainable Development Goals (SDG) indicators, based on national household surveys and other data sources. It complements the national *SDG Baseline Report on Children in Indonesia* produced by BAPPENAS and UNICEF, to support monitoring and evidence-informed policy making.

West Sulawesi (*Sulawesi Barat*) is a youthful province. Its 512,000 children represent 40 per cent of the total population. Eight in 10 children live in rural areas. Increased strategic investments in children are required to fast-track achievement of the SDGs for the province.

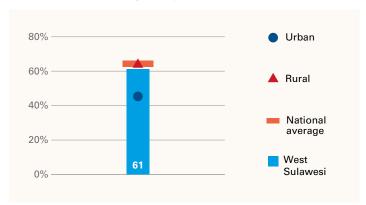

GOAL 1 NO POVERTY

Transition of the second secon

Some 81,000 children (16 per cent) were living below the official poverty line in 2015 (Rp 8,610 per person per day). Many more families are insecure and live on incomes that are only marginally higher. In addition, 61 per cent of children experienced deprivations in two or more non-income dimensions of poverty, with persistent disparities between urban and rural areas.¹

	Per cent	Number
Population below national poverty line	12.4	161,000
Children < 18 below national poverty line	15.9	81,000
Children < 18 below twice the poverty line	65.4	335,000

Multidimensional child poverty in West Sulawesi

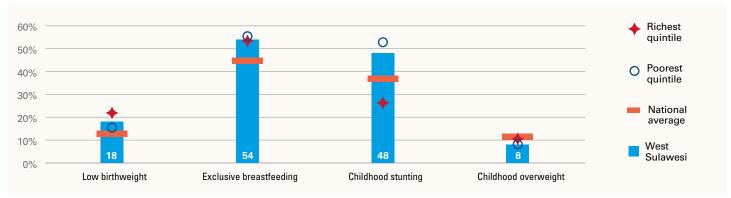

GOAL 2 ZERO HUNGER

Adopting optimal feeding practices is fundamental to a child's survival, growth and development. Fifty-four per cent of infants in West Sulawesi were exclusively breastfed for the first six months of life in 2015, which is well above the national average.

The prevalence of malnutrition is relatively high, including among those in more affluent households. Some 18 per cent of newborns have a low birthweight, and 48 per cent of children under five were stunted (low height for their age) in 2013.

Wealth disparities in child feeding and nutrition outcomes

GOAL 3

GOOD HEALTH AND WELL-BEING

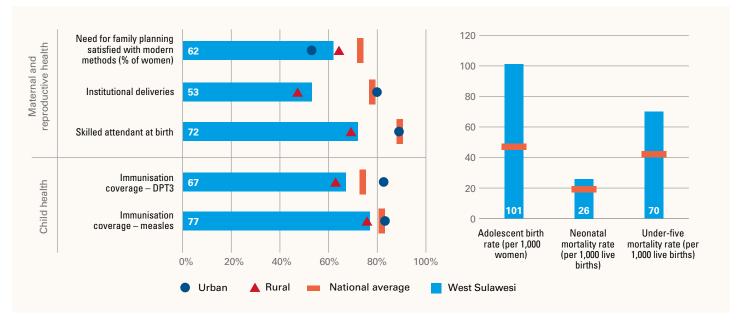

Despite progress, child mortality remains high. For every 1,000 live births, 26 newborn babies died in their first month of life and 70 before their fifth birthday.

Improving women's access to sexual and reproductive health services is critical. Only 62 per cent of women and adolescents aged 15-49 years had their need for family planning satisfied with modern methods in 2015, and three in 10 births occurred without

assistance from a skilled attendant. Levels of access are lower for mothers and children in rural areas.

Continued efforts are needed to reach and sustain high immunisation coverage. Three-quarters of infants were vaccinated against measles and 67 per cent received the recommended three doses of DTP vaccine in 2015.

Geographic disparities in maternal and child health

GOAL 4

QUALITY EDUCATION

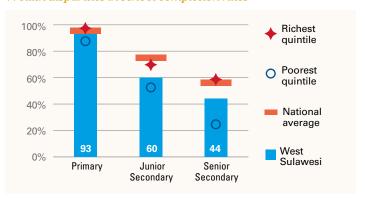

Children's school readiness can be improved through early childhood development programmes. The participation rate in organised learning among 6-year-olds was 91 per cent in 2015, though most pre-school children are already in primary school.

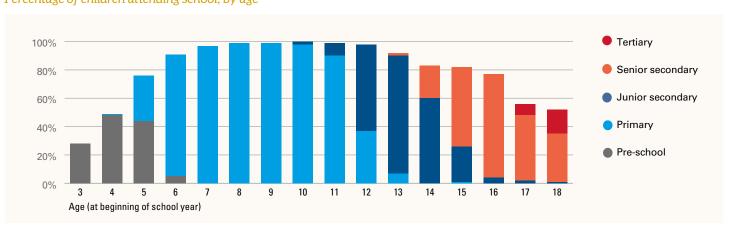

West Sulawesi has achieved near-universal access to primary education. However, children from the poorest households are much less likely to complete secondary school compared with their more affluent peers.

Quality of education is a key concern. Around a fifth of primary school children achieved the minimum national benchmark in reading and only 16 per cent in mathematics.

Wealth disparities in school completion rates

Percentage of children attending school, by age

GOAL 5

GENDER EQUALITY

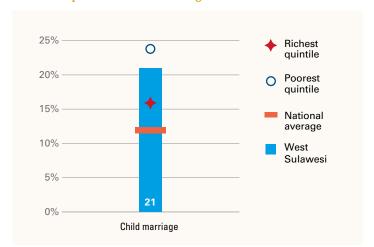

West Sulawesi continues to have relatively high levels of child marriage. One in five women aged 20–24 years were married or in union before the age of 18 in 2015, which is nearly twice the national average. Rates of child marriage are slightly higher among girls from the poorest households.

No representative data are available on violence against girls and women at provincial level. Evidence from a national survey indicates, however, that such violence is widespread: 28 per cent of ever-partnered women and girls experienced physical, sexual and/or psychological violence by a current or former intimate partner.

Wealth disparities in child marriage

GOAL 6

CLEAN WATER AND SANITATION

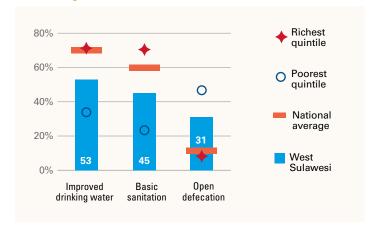

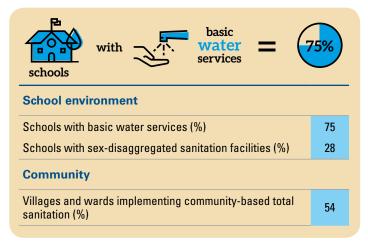

Achieving universal access to drinking water, sanitation and hygiene is crucial to further progress in health, education and poverty eradication. Half of the population used a basic sanitation facility at home in 2015, while nearly a third practised open defecation. Only a minority of schools have sex-separated toilet facilities. The coverage of improved drinking water sources is

higher, both in households and schools.2

Disparities based on wealth and place of residence are pronounced, pointing to the importance of integrating equity considerations into policy and practice. Progress is being made through the implementation of the community-based total sanitation programme.

Wealth disparities in access to water and sanitation

GOAL 16

PEACE, JUSTICE AND STRONG INSTITUTIONS

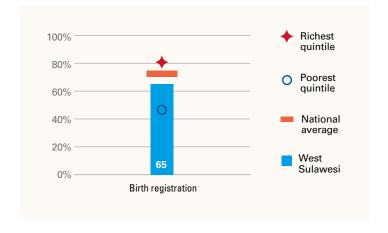

Progress is ongoing in improving levels of birth registration. In 2015, 65 per cent of children under 5 years of age had a birth certificate. There remain, however, significant differences between urban and rural areas and based on households' wealth status, due to financial and supply-side barriers.

Deprivation of liberty remains a common form of punishment for juvenile offenders, in violation of the principle that this should be a measure of last resort. In West Sulawesi, less than one per cent of all children in detention were unsentenced, which is significantly better than in most other provinces.

Little or no data is available on other child protection issues, such as violence against children and trafficking.

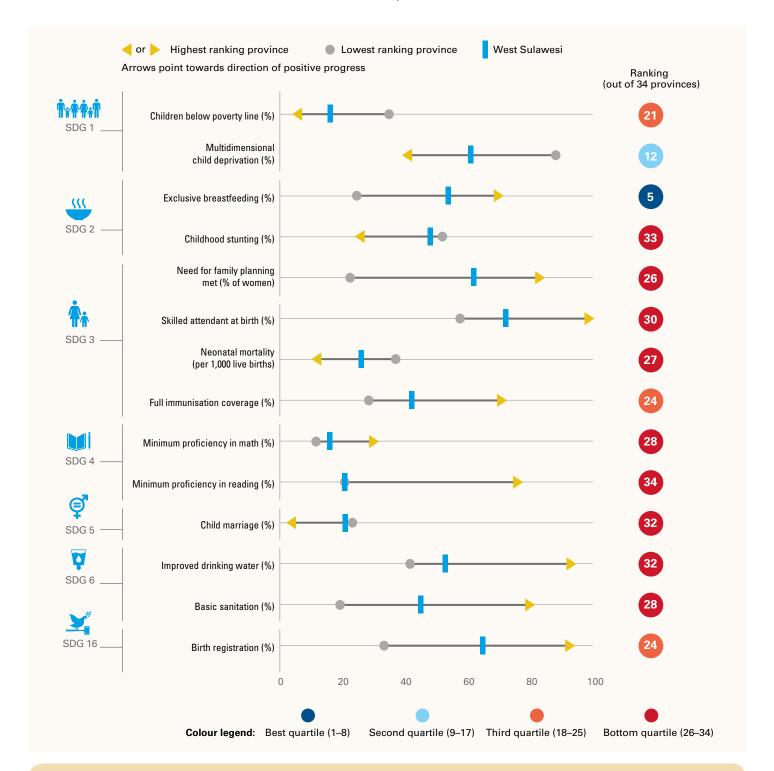

Wealth disparities in birth registration

PROVINCIAL SCORECARD

The scorecard summarises West Sulawesi's performance for a selection of SDG indicators compared to other provinces in the country. For each indicator, the graph shows West Sulawesi's average value as well as the provinces with the highest and the lowest data value.

On the right side of the scorecard West Sulawesi's rank for each indicator is shown, ranging from 1 for the highest performer to 34 for the lowest. Provinces are divided into four quartiles (blue for the highest ranking and red/orange for the lowest ranking provinces).

Notes

Sources: National household surveys (SUSENAS, RISKESDAS, IDHS) and administrative data (Ministry of Education and Culture, Ministry of Health). Detailed information on data sources and indicator definitions is available online at: https://sdg4children.or.id

- 1 Multidimensional child poverty is defined as children who experience deprivations in at least two of the following dimensions: food and nutrition; health; education; housing; water and sanitation; and protection.
- 2 Indonesia does not yet have nationally representative data on water quality that can be used to calculate the SDG indicator on the use of safely managed drinking water services. Instead, a nationally-defined proxy measure is used to set a baseline for SDG 6.
